

KNOWN ISSUES

Customer account administration not yet implemented via web interface.

Company information administration not yet implemented via web interface.

Coupons not yet implemented.

BUG: 2012-12-15 category filter is lost when updating cart. menu.php is looking for \$_GET['cat'], but form method is \$_POST

FIXED ** added hidden cat field to form. when page loads, if \$_GET['cat'] does not exist, use \$_POST['cat']

CONFIGURATION(?): DBMS allows deletion of parent records when child exists. Re created foreign key constraints with ON DELETE RESTRICT

several times on CUSTOMERS and ORDERITEMS several times with no change in behaviour.

BUG: 2012-12-16 program allows creation of empty orders.

FIXED ** "Update Order" and "Create Order" buttons are now hidden if 0 items in cart

BUG: 12/16/12 If you edit your account, even if you dont actually edit anything, clicking the "Save Changes" button causes the PWHASH

to be deleted (you can see this by refreshing the USER page in PhPMyAdmin). The account is still there, but you can no longer log into that account. This currently happens in /matt and /dev because they are using the same code, just different layouts.

FIXED ** editAccount.php was updating USERS.PWHASH to blank, when that field should only be updated during password change, which isn't implemented yet. Fixed bug by removing USERS.PWHASH from update query.
